Dear Pebble Community,

Pebble is committed to maintaining pharmaceutical standards, including GMPc manufacturing and a less than 10% variance on all ingredients. That's just one of the ways we ensure you and your family receive the highest quality products and service. Since the reliability of cannabinoid testing can be challenging at times within this new, burgeoning industry, we want to maintain those standards by providing you with full transparency.

For this particular batch of Pebble's 750 Liquid Caps, we ran a total of four different tests on the cannabinoids from two different reputable laboratories. While the variances in test results are minimal and well-within safety range, none of the four test results on their own met Pebble's elite pharmaceutical standards. Ultimately, we took an average of all four results, which does fall within our 10% or less variance requirements and meets pharmaceutical standards.

We want you and your family to feel as confident and informed as our families do every day when we take our Pebble. For the sake of transparency, we have provided all four of those test results here. Please feel free to review this information and contact us directly if you have any questions. You can reach a live person during normal business hours (Central Time) at 310-654-9247.

Thank you,

## NOTES:

N/A

% = % (w/w) = Percent (Weight of Analyte / Weight of Product)

\* Total Cannabinoids result reflects the absolute sum of all cannabinoids detected.

\*\* Total Potential THC/CBD is calculated using the following formulas to take into account the loss of a carbonyl group during decarboxylation step.

$$\text{Total THC} = \text{THC} + (\text{THCa} \times 0.877)$$

$$\text{Total CBD} = \text{CBD} + (\text{CBDa} \times 0.877)$$

ND = None Detected (Defined by Dynamic Range of the method)
